

Most Repeated Theory Questions

MODULE 1

1. Distinguish between Multiprogramming vs Multitasking and Multiprocessor vs Clustered systems
2. Define Operating System & explain Dual Mode Operation with a diagram
3. Explain Virtual Machine with a neat diagram
4. Explain OS Layered Architecture with a diagram
5. What are System Calls? Explain types with examples
6. Explain OS Services (User/System)
7. Explain the different services provided by the operating system to users and system processes.

MODULE 2

1. Explain Process States, Transition Diagram & PCB
2. What is IPC? Explain Message Passing & Shared Memory
3. FCFS & Round Robin ($q=2$ ms) – Waiting & Turnaround Time Calculation (Given P1,P2,P3,P4 dataset)
4. SRTF & Priority Scheduling – Compute Waiting & Turnaround Times
5. Explain Multithreading Models (Many-to-One, One-to-One, Many-to-Many)
6. Discuss Scheduling Criteria (5 criteria)
5. Discuss multithreading models (many-to-one, one-to-one, many-to-many).
6. Explain five scheduling criteria used in CPU scheduling.
7. For the given set of processes, compute Waiting Time and Turnaround Time using FCFS and Round Robin ($q = 2$ ms).
8. Compute average waiting time and turnaround time using SRTF (Shortest Remaining Time First) Priority Scheduling.
